Microsoft EMS Implementation

"We are using Office 365 for quite some time now and are very happy with its capabilities. We use SharePoint heavily. While Office 365 gives the capability to access the services from anywhere it does bring up a challenge of securing the information. Learning is our business and security of our data is most important to us. We wanted to have a solution in place that integrates well with our investment in Microsoft and can provide required security while not impacting the productivity. We found a good and competent partner 'Mismo Systems'. They suggested us the right solution, did a POC and implemented it as per our requirements. We are very happy with the approach, expertise and services of the team"

Head IT – Learning Company Gurgaon

Client Overview

Founded over two decades ago with the purpose of making a difference to people and the work they do in their organizations. When it started out, it focused on high impact corporate training and were the front runner in training innovation in India. In the last two decades, they have worked with giants in the industry across different sectors, to create a competitive advantage through learning and development.

It provides bespoke learning solutions to drive Results Based Learning™. It creates a measurable change in individual competencies and organizational capability through learning and development. By "Results" they mean improved learning quotient, knowledge and improved business performance for their clients and improved mental and behavioral capabilities for higher performance for participants.

Business Requirements

Our Client is using Office 365 for email, collaboration and content. They were looking for a solution that will increase the security of cloud environment while not impacting the productivity. Following were the primary requirements:

- Implement conditional access to Office 365 services (Exchange and SharePoint Online)
- Restrict access to Office 365 services from authorized devices only
- Restrict freelancer access to Office 365 services
- Information protection

- All devices must join to the domain for management and control to enforce organization policies.

They decided to involve a partner who can assess their existing infrastructure, understand their current and future business requirements and based on that can propose a solution.

They also wanted to test the solution before finalizing it.

Solution and Approach

After understanding the business requirements, Mismo Systems recommended Microsoft Enterprise Mobility and security solution.

Microsoft Enterprise Mobility Suite (EMS) is a set of tools that are deeply integrated to provide you with all you need to administer, provision and secure the devices that are used in your enterprise. With EMS, you can manage smartphones, tablets, and laptops in a single system where you can also manage user credentials, applications and security from a single place.

Mismo Systems setup a free trial of EMS for client and demonstrated its functionalities and capabilities to the client IT team and higher management and answered all the follow-up questions.

The client was very happy with the solution and satisfied with the capabilities of the solution and decided to get the solution implemented in their environment.

Outcomes

Mismo team carried out a detail assessment of the client environment and then carried out a smooth implementation of EMS to satisfy all the business requirements.

After the successful implementation, Mismo team provided documentation & training to client team to manage the environment in future.
